GUIDELINES
This policy does not certify benefits or authorization of benefits, which is designated by each individual policyholder contract. Paramount applies coding edits to all medical claims through coding logic software to evaluate the accuracy and adherence to accepted national standards. This guideline is solely for explaining correct procedure reporting and does not imply coverage and reimbursement.

DESCRIPTION
Nasal surgery is defined as any procedure performed on the external or internal structures of the nose, septum or turbinates. This surgery may be performed to improve abnormal function, reconstruct congenital or acquired deformities, or to enhance appearance. It generally involves rearrangement or excision of the supporting bony and cartilaginous structures and incision or excision of the overlying skin of the nose.

Nasal surgery, including rhinoplasty, may be reconstructive or cosmetic in nature. Current CPT codes do not allow distinction of cosmetic or reconstructive procedures by specific codes; therefore, categorization of each procedure is to be distinguished by the presence or absence of specific signs and/or symptoms.

Cosmetic Nasal Surgery
When nasal surgery is performed solely to improve the patient's appearance in the absence of any signs and/or symptoms of functional abnormalities, the procedure should be considered cosmetic in nature.

Reconstructive Nasal Surgery
When nasal surgery, including rhinoplasty, is performed to improve nasal respiratory function, correct anatomic abnormalities caused by birth defects or disease, or revise structural deformities produced by trauma, the procedure should be considered reconstructive.

POLICY
Rhinoplasty (30400, 30410, 30420, 30430, 30435, 30450) requires prior authorization.
Rhinoplasty for congenital anomalies (30460, 30462) does not require prior authorization.
Vestibular stenosis repair (30465) does not require prior authorization.
Septoplasty (30520) does not require prior authorization.

HMO, PPO, Individual Marketplace, Elite, Advantage
Coverage for rhinoplasty is dependent on benefit plan language, may be subject to the provisions of a cosmetic and/or reconstructive surgery benefit and may be governed by state and/or federal mandates. Under many benefit plans, rhinoplasty is not covered when performed solely for the purpose of altering appearance or self-esteem or to treat psychological symptomatology or psychosocial complaints related to one's appearance. In addition, rhinoplasty is specifically excluded under some benefit plans. Please refer to the applicable benefit plan language to determine the terms and conditions of coverage.

Paramount considers rhinoplasty a cosmetic surgical procedure.

Rhinoplasty (30400, 30410, 30420, 30430, 30435, 30450, 30460, 30462) may be considered medically necessary only in the following limited circumstances:

- When it is being performed to correct a nasal deformity secondary to congenital cleft lip and/or palate
- When rhinoplasty for nasal airway obstruction is performed as an integral part of a medically necessary septoplasty and there is documentation of gross nasal obstruction on the same side as the septal deviation
- Upon individual case review, to correct chronic non-septal nasal airway obstruction from vestibular stenosis (collapsed internal valves) due to trauma, disease, or congenital defect, when all of the following criteria are met:
  - Prolonged, persistent obstructed nasal breathing
  - Physical examination confirming moderate to severe vestibular obstruction
  - Airway obstruction will not respond to septoplasty and turbinectomy alone
Nasal airway obstruction is causing significant symptoms (e.g., chronic rhinosinusitis, difficulty breathing)
- Obstructive symptoms persist despite conservative management for 4 weeks or greater, which includes, where appropriate, nasal steroids or immunotherapy
- Photographs demonstrate an external nasal deformity
- There is significant obstruction of one or both nares, documented by nasal endoscopy, computed tomography (CT) scan or other appropriate imaging modality

Documentation of these criteria should include:
- Documentation of duration and degree of symptoms related to nasal obstruction, such as chronic rhinosinusitis, mouth breathing, etc.
- Documentation of results of conservative management of symptoms
- If there is an external nasal deformity, preoperative photographs showing the standard 4-way view: anterior-posterior, right and left lateral views, and base of nose (also known as worm's eye view confirming vestibular stenosis; this view is from the bottom of nasal septum pointing upwards)
- Relevant history of accidental or surgical trauma, congenital defect, or disease (e.g., Wegener's granulomatosis, choanal atresia, nasal malignancy, abscess, septal infection with saddle deformity, or congenital deformity)
- Results of nasal endoscopy, CT or other appropriate imaging modality documenting degree of nasal obstruction

Paramount considers rhinoplasty cosmetic for all other indications.

Vestibular stenosis repair (30465) is considered medically necessary when there is chronic nasal obstruction due to vestibular stenosis (i.e., collapsed internal valves) and there is demonstration of improvement of the airway by EITHER of the following methods:
- positive Cottle maneuver
- lateralization of the upper lateral cartilage from inside the nose with an object (e.g., cotton swab or nasal speculum)

Septoplasty (30520) is considered medically necessary when performed for ANY of the following indications:
- septal deviation causing nasal airway obstruction resulting in prolonged or chronic nasal breathing difficulty or mouth breathing that has proved poorly responsive to a recent trial of conservative medical management (e.g., topical/nasal corticosteroids, antihistamines) lasting at least six weeks
- rhinosinusitis secondary to a deviated septum that does not resolve after appropriate medical and antibiotic therapy and EITHER of the following indications are present:
  - recurrent acute rhinosinusitis: four or more acute episodes per year
  - chronic rhinosinusitis: duration more than 12 weeks
- recurrent epistaxis related to a septal deformity
- performed in association with a covered cleft lip or cleft palate repair
- obstructed nasal breathing due to septal deformity or deviation that has proved poorly responsive to medical management lasting at least six weeks and is interfering with the effective use of medically necessary continuous positive airway pressure (CPAP) for the treatment of an obstructive sleep disorder (i.e., obstructive sleep apnea with an apnea/hypopnea index (AHI) ≥ 15 as documented by polysomnography or home/portable sleep study)

CODING/BILLING INFORMATION
The appearance of a code in this section does not necessarily indicate coverage. Codes that are covered may have selection criteria that must be met. Payment for supplies may be included in payment for other services rendered.
